Tailscale CLI Cheat Sheet

GETTING STARTED

Install (macOS)
```
brew install tailscale
```

Install (Linux)
```
curl-fsSLhttps://tailscale.com/install.sh | sh
```

Start & authenticate
```
sudo tailscale up
```

Show status & peers
```
tailscale status
```

Show version
```
tailscale version
```

CONNECTION

Connect / disconnect
```
tailscaleup | tailscale down
```

Login
```
tailscale login
```

Log out & remove device
```
tailscale logout
```

Auth key (non-interactive)
```
tailscale up --auth-key=tskey-auth-xxxxx
```

Custom hostname
```
tailscale up --hostname=my-server
```

Accept subnet routes
```
tailscale up --accept-routes
```

Accept DNS settings
```
tailscale up --accept-dns
```

Block incoming (shields up)
```
tailscale up --shields-up
```

Non-root operator
```
tailscale up --operator=$USER
```

Reset unspecified flags
```
tailscale up --reset
```

EXIT NODES & SUBNET ROUTERS

Use an exit node
```
tailscale up --exit-node=<name>
```

Offer as exit node
```
tailscale up --advertise-exit-node
```

Advertise subnet
```
tailscale up --advertise-routes=192.168.1.0/24
```

STATUS & DIAGNOSTICS

Tailscale IP (-4 / -6)
```
tailscale ip [-4|-6]
```

Ping a peer
```
tailscale ping <hostname>
```

Network check
```
tailscale netcheck
```

Status as JSON
```
tailscalestatus --json
```

Who owns this IP?
```
tailscalewhois 100.x.y.z
```

Bug report
```
tailscale bugreport
```

DERP relay map
```
tailscaledebug derp-map
```

Daemon preferences
```
tailscale debug prefs
```

SSH

Enable SSH server
```
tailscale up --ssh
```

SSH to a peer
```
tailscalessh user@hostname
```

SSH via Tailscale IP
```
tailscale ssh user@100.x.y.z
```

Peers with SSH
```
tailscalestatus | grep -i ssh
```

SERVE & FUNNEL (tailnet / public)

Serve local port (tailnet)
```
tailscale serve 3000
```

Expose publicly (Internet)
```
tailscale funnel 3000
```

Show serve/funnel config
```
tailscale serve status
```

Reset serve config
```
tailscaleserve reset
```
